Abstract	This research shows the design and implementation of a small and simple Arabic word-puzzle game to test the effect of electronic games in enhance and support the traditional learning system. The system is built from the real needs of classrooms in the Iraqi primary schools so the game is designed for primary school students (first and second grade) and this required the exploration of how schools use and teach information. The system is built by using Visual Basic version 6 programming language in conjunction with the Microsoft Office Access 2007, Results show our game based educational program is effective.
